

2017 Edition

Guide to Farm Trucking in Oregon

OREGON
ASSOCIATION OF
NURSERIES

OREGON
WHEAT

Revised May 2017

This publication is a basic guide to farm trucking in Oregon. But it cannot contain everything a farmer needs to know.

Farmers with questions about regulations can contact their association representatives or the Oregon Department of Transportation at the numbers listed here.

Farm Trucking in Oregon – The Basics

 **Get a U.S.DOT Number.** A U.S. DOT number is used as an identification number and is issued by the U. S. Department of Transportation. Companies who operate vehicles with a gross vehicle weight rating or actual weight over 10,000 pounds must obtain a U.S. DOT number.

NOTE:

As of December 12, 2015, the USDOT number **MUST** be obtained through the Federal Motor Carrier Safety Administration's Unified Registration System. The Unified Registration System is available online at:

<https://portal.fmcsa.dot.gov/UrsRegistrationWizard/>

 **Get farm-certified.** Apply for farm plates by first completing the Farm Certification Application and submitting it to the ODOT Motor Carrier Transportation Division in Salem.

Farm Certification Application:

www.odot.state.or.us/forms/motcarr/reg/9670fill.pdf

 **Get farm license plates.** Oregon DMV issues "F" farm plates, with approval of the MCTD. DMV needs MCTD approval of the Farm Certification Application before issuing farm plate(s). If there's a delay getting MCTD approval of either the initial Certification Application or a later request for additional plates, DMV staff issues temporary, 45-day farm registration permits for a farmer's vehicle(s).

 **Meet fuels tax requirements.** A farmer with a bulk storage tank, an F-plated vehicle, and/or a diesel powered rig commonly needs a Use Fuel User License and must file Use Fuel Tax Reports. Contact the ODOT Fuels Tax Group – 888-753-2525 or 503-378-8150 – for more info or visit: <http://fuelstax.oregon.gov>

 **Determine if trucks are subject to safety regulations.** Recent Federal legislation has resulted in safety exemptions for some farm vehicles. The Moving Ahead for Progress in the 21st Century Act (MAP-21), was signed into law on July 6, 2012. The term “**Covered Farm Vehicle**” is used to describe farm vehicles that are exempt from many safety regulations. Carefully read information about MAP-21 and **Covered Farm Vehicle** in this document.

 **Interstate Operations need UCR.** The U.S. DOT adopted into federal law, the Unified Carrier Registration (UCR) program. The UCR is a base-state system for registering interstate motor carriers with vehicles over 10,000 lbs., including private, for-hire, and exempt carriers, farmers operating in interstate commerce, brokers, freight forwarders, and leasing companies.

- Oregon-based interstate motor carriers must pay on-line at a UCR-designated website www.ucr.in.gov - or they must select a Western state, other than Oregon, and pay their fees to it.

Benefits of Oregon Farm Certification

- **Lower annual truck registration fees.**
Savings vary. A 26,000-pound farm truck pays \$137, which is \$627 less than the fee for a non-farm vehicle. An 80,000-pound truck pays \$440, which is \$558 less.
- **Exempt from Oregon weight-mile tax when used for qualified Farm operations.**
May still be subject to state fuels tax.
- **Exempt from motor carrier insurance requirements.** Farm vehicles must comply with DMV insurance requirements.
- **Covered Farm Vehicles are exempt from some motor carrier safety regulations when operating in Oregon.**
- **Exempt from Oregon DEQ pollution control equipment and emissions testing.**
- **Lower fee for participation in Oregon's International Fuel Tax Agreement (IFTA).**
- **Farm plates help identify vehicles that can be operated with a regular driver license with a "Y" or "Z" farm endorsement.**
But a farm plate is not required to be eligible to use the farm endorsement.

Permitted Uses of Farm-Plated Trucks

Oregon law – ORS 805.390 – allows farm-registered trucks to be used in the following ways:

- Hauling the farmer's own agricultural commodities, products, or livestock that were originally grown or raised by the farmer on his or

her own farm, ranch, or orchard. This includes products or byproducts of commodities or livestock that were

packed, processed, or manufactured by the farm or for the farm, if the farmer retains ownership of the products. This does not include products that have been transformed into a finished state.

- Hauling things that are incidental to the regular operation of the farmer's farm. Also, hauling supplies, equipment, or materials that will be consumed or used on the farmer's farm.
- Hauling forest products to his or her farm, or hauling forest materials originating on a farm or as an incident to the regular operation of the farm. But the truck cannot be used to haul piling or poles over 30" around at the large end or logs over 8' 6" long. A farm-plated truck with a loaded weight of 16,000 pounds or less may, however, transport logs over 8' 6" if they're not over 16' 6" long.
- Transporting straw, whether or not the straw was grown on the farmer's own farm, if the farmer hauling the straw is the one who bales it. "Straw" is defined as the stalk of grass or grain left after threshing.

- Personal use by the farmer, any member of his or her immediate family, or any person employed by the farmer. “Personal use” includes such things as taking the boat to the lake, hauling the camper, and going to the movies or the grocery store.
- Hauling products, supplies, equipment, or materials for another qualifying farmer on a bonafide, documented exchange of labor basis if what’s hauled will be used or consumed on that farmer’s farm or is directly related to the operation of the farm.
- Farm trucks may be rented or borrowed by a farmer to haul his or her own agricultural commodities, products, or livestock that were originally grown or raised on his or her farm, but only if that farmer could qualify for farm registration for trucks of the type and size rented or borrowed.

“T” Truck Plate Requirements

Trucks that don’t have a farm plate will need an Oregon “T” plate if they operate with a combined weight over 10,000 pounds. Truck tractors will need one if they operate with a combined weight over 8,000 pounds – ORS 803.430(3)(a)(b). “Combined weight” means the total empty weight of all vehicles in a combination plus the total weight of the load carried on that combination of vehicles – ORS 801.199. Commercial trucks over 26,000 pounds subject to weight-mile tax display an Oregon Commercial or Apportioned plate rather than a T-plate.

Determining Registration Weight

Registration weight is the total weight of a vehicle or all vehicles in a combination (e.g. a truck and any trailers it may pull); plus the total weight of the load carried on that vehicle or combination of vehicles.

The weight of a camper or the trailing vehicles listed below should not be included when determining registration weight:

- Trailers with a loaded weight of 8,000 pounds or less.
- Special-use trailers, travel trailers or manufactured structures and fixed load vehicles.
- Towed motor vehicles.

If your operation will temporarily exceed your registration weight, you must obtain a temporary Registration Weight Trip Permit. You may obtain this permit at DMV or MCTD. Call MCTD Registration at 503-378-6699 to obtain.

NOTE: Operations that exceed legal size may need a variance permit issued by MCTD's Over-Dimension Permit Unit. See next page for more information.

Over-Dimension Permits

The Motor Carrier Transportation Division issues single-trip and annual variance permits for over-weight, over-height, over-width, and over-length truck loads. Trucks need an over-dimension permit when vehicle combinations exceed maximum size and/or weight limits. A farm truck needs one, for example, when the truck is operating over 80,000 pounds. DMV may issue a farm plate for that truck, but the farmer still needs to contact MCTD to get an Extended Weight Permit to operate over the maximum weight limit.

Over-Dimension Permits Contact MCTD — 503-373-0000

A permit is also needed for any non-divisible load for which any one of the following applies:

- Width of the load or hauling equipment exceeds 8 feet, 6 inches, and/or height of vehicle or vehicle combination and load exceeds 14 feet.
- Any single axle weight exceeds 20,000 pounds, and/or any tandem axle exceeds 34,000 pounds, and/or gross combination weight exceeds 80,000 pounds, and/or gross weight of a group of axles exceeds those in the legal weight table shown on Group Map 1.
- Front overhang exceeds 4 feet beyond the front bumper of the vehicle.

- Load greater than 40 feet, exceeding 5 feet beyond the end of the semi-trailer, or load less than or equal to 40 feet, exceeding 1/3 of the combination wheelbase, whichever is less.
- Vehicle combination length exceeds those authorized on Group Map 1.

Oregon law provides an exemption for farm trucks that exceed maximum allowable weight limits. A farm truck transporting field-loaded agricultural products in Malheur County may operate at greater weights listed in ORS 818.010(4). Field-loaded trucks can travel state and county roads in Malheur County (unless they violate posted weight limits on a road or bridge), but the law specifies that they cannot travel on I-84 or US95.

The law provides an exemption from maximum size limits for implements of husbandry hauled, towed, or moved on any highway not a part of the Interstate system if the movement is incidental to a farming operation and the owner is engaged in farming or is hired by or under contract to a farmer to perform agricultural activities — ORS 818.100(12). This type of movement is subject to the maximum limit of allowable extension beyond the last axle of a combination of vehicles shown in Table II of ORS 818.080(2).

The law also provides an exemption from the limits on the number of vehicles in combination, allowing for a combination of three implements of husbandry, or two implements of husbandry hauled or towed by another vehicle — ORS 818.120(7).

Operating Trucks Under Lease Agreements

Farmers may lease trucks for their farming operation, but only what is reasonable to support the farming operations.

When an Oregon farmer leases a truck for his farming operation, or an out-of-state farmer leases a truck for his farm-related operations in Oregon, the farmer must carry in that truck a copy of the leased vehicle letter that is obtained from the Oregon Farm Desk. This leased vehicle letter is vehicle specific. The farmer must also carry a copy of the Lease / Rental Agreement that contains the starting and ending date and the terms of the rental basis (daily, weekly, monthly, annually).

A farm certification or farm verification does not exempt a farmer from Oregon use fuel tax law. For further information about the law, call the ODOT Fuels Tax Group at 503-378-8150 or visit their Web site: www.oregon.gov/ODOT/CS/FTG/

**Questions?
Contact the ODOT Motor Carrier
Transportation Division, Farm Certification
Unit — 503-378-5203.**

For-Hire Hauling

A trucker is considered to be “for-hire” if he holds himself out to provide transportation service to the public for compensation.

A farmer may use his farm-registered truck to haul products, supplies, equipment, or materials for another qualifying farmer on a bonafide, documented exchange of labor basis if what’s hauled will be used or consumed on that farmer’s farm or is directly related to the operation of the farm.

In other situations, a farmer with a farm-registered truck who wants to haul for-hire must obtain a Class 1A permit from the ODOT Motor Carrier Transportation Division. The permit authorizes occasional use of the vehicle to haul for-hire from point to point within Oregon only. It does not, however, authorize hauling household goods or passengers or hauling for-hire interstate. There is a one-time \$300 filing fee for the Class 1A permit.

Farmers who want to haul for-hire within Oregon also need to obtain a paper credential called an Oregon Weight Receipt and Tax Identifier so they can conduct both farm and for-hire operations. The haul-for-hire operations are subject to motor carrier regulations, including requirements related to weight-mile tax, bond, insurance, safety, and record keeping. Farmers must keep records showing the miles operating for-hire, the miles the vehicle was used in exempt farm operations and file monthly or quarterly tax reports. (More information on page 37.)

Questions? Contact the ODOT Motor Carrier Transportation Division at 503-378-5203.

What is Interstate Commerce?

A farmer operating vehicles that are **NOT Covered Farm Vehicles** (see definition on next page) may be subject to safety regulations when operating in interstate commerce. In federal law – 49 CFR 390.5 – “interstate commerce” means trade, traffic, or transportation in the United States:

1. Between a place in a State and a place outside of such State, including a place outside the U.S.;
2. Between two places in a State through another State or a place outside the U.S.; or
3. Between two places in a State as part of trade, traffic, or transportation originating or terminating outside the State or the U.S.

Sometimes even hauling from point to point within a state can be interstate commerce. It's usually interstate commerce when, for example, a farmer hauls wheat from an Oregon field to an Oregon elevator. After the elevator buys the wheat it may ship some to a local flour mill and some to a facility for shipment overseas. Just because the wheat stops and changes hands at a middle point like the storage elevator, it doesn't necessarily break its transportation into two separate parts. The trip from the field to the elevator and then later delivery to various customers can both be trips in interstate commerce. Also, when wheat is commingled and there's no way to know which grain went where, it's more likely to be interstate commerce. Wheat taken from an Oregon field to an Oregon mill and turned into flour is intrastate commerce because the wheat is substantially changed into something else.

MAP-21 Safety Exemptions

The Moving Ahead for Progress in the 21st Century Act, (MAP-21) identified certain farm vehicles exempt from some safety regulations. The term “**Covered Farm Vehicle**” is used to describe farm vehicles that are exempt from some, but not all safety regulations.

A Covered Farm Vehicle includes:

A straight truck or articulated vehicle registered in a state with a designation that identifies the vehicle as a farm vehicle; and is operated by the owner or operator of a farm or ranch, or an employee or family member of an owner or operator of a farm or ranch; and is used to transport agricultural commodities, livestock, machinery or supplies to or from a farm or ranch and is not used in for-hire motor carrier operations; and not transporting hazardous materials requiring placarding.

Covered Farm Vehicles with a gross vehicle weight or gross vehicle weight rating of 26,001 pounds or less may utilize the safety exemptions anywhere in the United States.

Covered Farm Vehicles with a gross vehicle weight or gross vehicle weight rating of more than 26,001 pounds may use safety exemptions anywhere in the State of registration or across State lines within 150 air-miles of the farm or ranch.

Covered Farm Vehicles are exempt from Federal Motor Carrier Safety Regulations, Parts 382 (drug/alcohol testing program), 383 (CDL), 391 (medical card qualifications only), 395 (hours of service), and 396 (roadside truck inspections).

Farm Truck Operations Checklist

The following pages provide a checklist of the basic federal and state safety requirements for farm trucking in Oregon. **MAP-21 allows for some exemptions for Covered Farm Vehicles.**

In order to determine if safety regulations apply, you must first determine if a **Covered Farm Vehicle** is being operated. Safety regulations apply to the following vehicles when operating in interstate commerce except when determined to be a **Covered Farm Vehicle**.

1. Trucks with a gross vehicle weight rating (GVWR) or combination weight rating (GCWR) of 10,001 pounds or more, or
2. Actual weight of 10,001 pounds or more, or
3. Trucks transporting a hazardous material in a quantity requiring placards, or
4. A vehicle designed to transport 16 or more passengers, including the driver

The regulations also apply to trucks operating in Oregon intrastate commerce when hauling for-hire, when over 80,000 pounds, or when pulling triple trailers.

Safety Regulations for Interstate Farm Operations

Insurance

Have at least the minimum amount of liability insurance required by DMV. Trucks transporting hazardous materials may need insurance coverage between \$1 million and \$5 million.

Parts & Accessories

Check all of the following:

- Headlights and stop lights work.
- Tractor and trailer have reflective sheeting or reflectors to make them more visible at night.
- Truck has service brake, parking brake, and brakes on all wheels. Trucks towing a trailer have breakaway and emergency brakes.
- Brake tubing and hoses are okay.
- Truck has brake warning system that tells driver of problems with hydraulic brakes, air brakes, or vacuum brakes.
- Windshield isn't discolored or cracked in area from top of steering wheel to within two inches of windshield top.

- No fuel system part is wider than the widest part of the truck or forward of the front axle. Fuel lines don't extend between the truck and trailer.
- Coupling devices and fifth wheel assemblies are securely attached and safe.
- Cargo is loaded and secured so it will not shift or fall off.
- Tires are in good shape, including 4/32 inch or more tread on front tires and 2/32 inch or more on other tires. Wheels are in good shape – no cracks or loose fasteners.
- Exhaust system is securely fastened and not located below fuel tank or tank filler pipe or located where it could burn or damage wiring, fuel supply, or anything combustible. Also, there are no temporary repairs or patches and it's not leaking at a point under the cab or sleeper.
- There's a bumper or other device to prevent under ride if another vehicle strikes the rear end. (Tractors, pole trailers, and driveaway towaway vehicles are exempt.)
- Truck is equipped with functional seat belts (applies to post-1965 trucks).
- Emergency equipment includes stopped vehicle warning devices, spare fuses, and fire extinguisher with a rating of at least UL 5 B:C, or 10 B:C if transporting hazardous materials.

- Frames and suspension systems – axles, adjustable axles, leaf and coil springs, torsion bars, air suspensions – are structurally sound and in safe working order. There are no cracked or broken frame members.
- Steering system – steering wheel, steering column, gear box, ball joints – are in proper working order.

Inspection, Repair, and Maintenance

Inspection, repair, and maintenance records for each vehicle must be saved on file for one year. Drivers are not required to submit daily driver vehicle inspection reports (DVIR's) unless defects are found, completed reports must be maintained for at least 3 months. Pre and Post Trip inspections are still required to cover service brakes (including trailer brake connections), parking brake, steering, lights, tires, horn, windshield wipers, rearview mirrors, coupling devices, wheels and emergency equipment. Post trip reports do not apply to one-truck operators.

Note: Not Required for Covered Farm Vehicles

Annual Truck Safety Check

Any truck that operates in interstate commerce must be checked by a qualified person at least once a year and a copy of that checkup must be kept for 14 months. Knowledgeable farmers can do their own annual truck safety check.

Note: Not Required for Covered Farm Vehicles

 **Driver Qualifications**

A farm truck driver must be at least 18 years old, be able to safely operate the type of vehicle being driven, be able to read and speak English, and be physically qualified. Also, he or she must provide a list of all traffic violations to his or her employer and pass a road test. The driver may not be disqualified (driving privileges suspended in any state), and must have a current, appropriate operator's license.

Note: Medical Qualification Standards are Not Required for Covered Farm Vehicles

 **CDL Requirements**

A driver needs a CDL to operate a farm truck when:

1. The truck and trailer have a GCWR or actual weight of 26,001 pounds or more, and the trailer GVWR or actual weight is 10,001 pounds or more, or
2. The truck has a GVWR or actual weight of 26,001 pounds or more, or
3. The vehicle is transporting hazardous materials that require placards.

NOTE: When hauling for the farmer's farm, the driver of a farm truck over 26,000 pounds doesn't need a CDL if he or she has a Farm Endorsement on a Class C license and operates within 150-miles of the farm, including distance into Washington or Idaho. (Triple trailer operations require a CDL.)

Note: Not Required for Covered Farm Vehicles

Farm Endorsements for Vehicles NOT Defined as Covered Farm Vehicles

Most drivers of farm vehicles are not required to have a CDL if they have a farm endorsement on their regular driver's license. A farm endorsement allows drivers to operate vehicles equipped with air brakes, tankers, double trailers, and vehicles transporting hazardous materials when the vehicle is properly placarded.

To qualify for a farm endorsement the driver must:

- Be at least 16 years old, provide Proof of Identification, complete a Farm Endorsement Application, and pay appropriate fees
- Meet the qualifications for or have a non-commercial Class C (or higher) driver license
- Have a good driving record, as defined in Oregon Administrative Rules 735-062-0085

Drivers with a "Y" or "Z" farm endorsement can drive large farm trucks used to transport agricultural products, farm machinery, or farm supplies to and from a farm, operated within 150 miles of the farm, and not used in for-hire operations.

A CDL is always required to operate a triple trailer combination and drivers need a "T" endorsement. A CDL is also required to transport passengers in a vehicle designed for 16 or more people, including the driver. A "P" endorsement is required to transport farm workers or other passengers.

Drug and Alcohol Testing

Drivers required to have a CDL are subject to five types of drug and alcohol tests:

1. Pre-employment
2. Post-accident
3. Random
4. Reasonable suspicion
5. Return-to-duty and follow-up.

It's important to keep records related to testing. Also, motor carriers must establish a policy regarding alcohol misuse and controlled substance abuse and provide drivers with related educational materials.

Testing requirements don't apply to farmers with a farm endorsement operating within 150 miles of the farm or drivers who are not required to have a CDL for the type of vehicle they're operating. If a driver does not need a CDL but chooses to have one, he or she is not subject to testing.

Note: Not Required for Covered Farm Vehicles

Interstate Driver Hours-of-Service

- No more than 11 hours driving following 10 hours off duty.
- No driving after 14 hours after coming on duty following 10 hours off duty.
- No driving after 60 hours on duty in 7 consecutive days, or 70 hours on duty in 8 consecutive days.
- A 7 or 8 consecutive day period may restart after 34 hours off duty.
- Keep log book records for six months.

EXCEPTION: Under Oregon Administrative Rules, carriers operating in intrastate commerce and transporting property other than hazardous materials can follow these limits:

- Drivers may not exceed 12 hours driving after 10 consecutive hours off duty.
- Drivers may not drive beyond the 16th hour after coming on duty following 10 consecutive hours off duty.
- Drivers may not drive following 70 hours on duty in any 7 consecutive days, or 80 hours on duty in any 8 consecutive days.
- A 7 or 8 consecutive day period may restart after 34 hours off duty.

Driving time limits don't apply to farm truck drivers hauling agricultural commodities or farm supplies within a 150 air-mile radius from the source of the commodities, or the distribution point for the farm supplies, when done during planting and harvesting seasons within the state.

Note: Not Required for Covered Farm Vehicles

Vehicle Identification

Trucks should be marked on both sides with the operating company's legal name or trade name and the U.S. DOT number. Letters and numbers must contrast sharply with background colors and be legible from a distance of 50 feet.

Farmers who operate vehicles 26,000 pounds or less, solely intrastate, are exempt from these marking requirements.

NOTE: As of December 12, 2015, the only option available for obtaining a USDOT number is through the Federal Motor Carrier Safety Administration's (FMCSA) under Registration. Register online at: www.portal.fmcsa.dotgov/UrsRegistrationWizard/

Biennial Updates are required and can be done at the website listed above or by filing a MCS-150 form.

Trailer and Truck Tractor Markings

Trailers and the rear of truck tractors need to be marked with red and white reflective material to make them visible to other drivers at night.

Since 1993, manufacturers have been outlining trailers with red and white reflective tape or hard plastic reflector strips. In 1999, the Federal Motor Carrier Safety Administration ordered all older trailers to be retrofitted to the new standards.

The requirements apply to all trailers and semi-trailers with an overall width of 80 inches and a gross vehicle weight rating of 10,001 pounds or more. The only exceptions are pole trailers, trailers transported in a driveaway towaway operation (when the trailer itself is the cargo or is being towed for repair), and trailers used only as offices or dwellings.

Marking requirements are found in Part 393.13, in the Federal Safety regulations:

www.fmcsa.dot.gov/

Rear Impact Guards

Trucks and trailers need a rear impact guard to protect against vehicles going under them in a collision. For trailers manufactured after January 26, 1998, the rear impact guard must be within 12 inches of the rear of the vehicle, no more than 22 inches from the ground, and extending to within 4 inches of the sides. All trucks and older trailers can have a rear impact guard that is within 24 inches of the rear of the vehicle, no more than 30 inches from the ground, and extending to within 18 inches of the sides.

The requirements apply to all vehicles with a gross vehicle weight rating of 10,000 pounds or more, except truck tractors, pole and pulpwood trailers, special purpose vehicles, and certain temporary living quarters. The regulations are in Part 393.86.

www.fmcsa.dot.gov/rules-regulations/administration/fmcsr/FmcsrGuideDetails.asp?menukey=393

Crash Reporting

Report to DMV any crash involving a fatality, injury, or damage exceeding \$1,500. Also, report to the ODOT Crash Analysis and Reporting Unit any crash involving a fatality, injury, or disabling damage requiring that a vehicle be towed away. The Motor Carrier Crash Report can be completed on paper or online.

To report on paper, complete the Oregon Traffic Accident and Insurance Report, which includes a Motor Carrier Crash Report on pages 6 and 7. File that with the Crash Analysis and Reporting Unit of ODOT's Transportation Development Division.

Oregon Traffic Accident and Insurance Report

www.odot.state.or.us/forms/dmv/32.pdf

To report online, use the Oregon Trucking Online Crash Report Form and submit it electronically.

Online Crash Report Form

www.oregontruckingonline.com/cf/MCAD/pubMetaEntry/accidentRpt/

Maintain a crash register, including copies of crash reports, for three years after a crash.

Load Securement

A commercial motor vehicle must be loaded and equipped, and its cargo secured, to prevent anything from leaking, spilling, blowing, or falling from the vehicle. Cargo must also be contained, immobilized, or secured to prevent any shifting that affects vehicle stability or maneuverability.

Hay and straw hauling provides one example of the load securement challenges farmers commonly face. In recent years, the Federal Motor Carrier Safety Administration confirmed that a combination of longitudinal tiedowns can unitize hay bales and with one or two lateral securement devices, depending on vehicle length, provide a system that meets or exceeds securement requirements. Here's a summary of acceptable securement practices:

Bale Placement — The load must be balanced and positioned so it's stable without tiedowns.

- **Small bales** (see Figure 1) — *Sides of load:* Do not place outside bales in the same direction in more than two successive tiers (A), except one bale above and below a tier, up to three tiers in succession (B). In the top tier, load bales crosswise to the vehicle (C). Do not load any bale vertically.
- **Big bales** — *Sides of load:* Do not place outside bales in the same direction in more than three successive tiers.

Load projection — Bales may extend over the truck cab if they're supported, interlocked with other bales, and don't obstruct the driver's view. But no bales may extend beyond the vehicle bed between a truck and trailer, or semi-trailer and

trailer, or more than one-third the bale length beyond the rear of the bed surface on a single vehicle or the last vehicle in a combination.

Longitudinal Tiedowns — Unitize the load with two longitudinal tiedowns, each with a minimum working load limit of 2,100 pounds, and secured with a tightening device (F, I). The tiedowns must be applied over V-boards (E), or big bales may use the alternate method below.

With V-Boards (big or small bales) — Two tiedowns anchored at the front and rear near the corners (D), extended over the top, and crossed or connected with a tightening device at the center (F).

Alternate securement (big bales) — Two tiedowns anchored at the front and rear of the load at least 48 inches apart, crossed at the front and rear (G), passed to the outside around the upper corners of the load (H), and connected with a tightening device at the top center (I).

Lateral Tiedowns — Each tiedown must have a minimum working load limit of 4,000 pounds. Multiple tiedowns may be substituted if each has a load limit of 625 pounds, with a combined working load limit of 4,000 pounds or more. Tiedowns less than 2 inches in width or diameter must include V-boards. Vehicles 32 feet or less long require one tiedown in the center of the length of the vehicle. Longer vehicles need two tiedowns – at one-third and two-thirds the length of the vehicle.

Farm Operations in Oregon's Neighbor States

REGISTRATION

Washington and Idaho have agreements with Oregon to waive its registration requirements for farm-plated trucks operating within 50 miles of the border. Oregon farmers can haul products from point of production to market or warehouse in that state. They can also haul commodities, supplies, or equipment for their farm or ranch. But if they go beyond 50 miles of the border, farmers must meet state registration requirements.

Oregon has other farm-related agreements with Idaho, Kansas, Missouri, Nebraska, North Carolina, Wyoming, Nova Scotia, and Saskatchewan. It has a very limited agreement with Nevada and no agreement with California. For more information about reciprocity, contact the Oregon Farm Desk at 503-378-5203.

FUEL TAX

Oregon farmers may operate in neighboring states if they pay each state's diesel fuel tax. Oregon farmers either need to participate in the International Fuel Tax Agreement (IFTA) or get a temporary fuel tax trip permit before going to California, Nevada, or Washington. Those states don't allow truckers to stop at the nearest truck stop or Port of Entry to get a permit. Idaho is the only neighbor state that allows farmers who don't participate in IFTA to obtain a fuel tax trip permit at their first stop in the state.

Under IFTA, an Oregon farmer pays an annual license fee to operate in other states and Canada. It's a \$50 fee if more than half of the farmer's

IFTA-qualified vehicles are farm vehicles. The farmer then files quarterly reports showing the miles traveled and fuel taxes owed. Oregon collects the fuel tax and distributes it on behalf of the farmer. Call the ODOT Motor Carrier Division IFTA Unit at 503-373-1634 for more information.

CALIFORNIA FUEL TAX PERMITS

Temporary permits can be obtained at two Medford truck stops on I-5 — the Petro Truck Stop at 541-535-3372, and Pacific Truck Center at 541-779-0792. Truckers can also call the Board of Equalization, Fuels Tax Division, in Sacramento at 916-322-9669.

NEVADA FUEL TAX PERMITS

Temporary permits can be obtained from AKD Permit Services at 800-257-4568, The Permit Co. at 800-331-0418, or Transceiver at 800-749-6058. Call the Nevada DMV Motor Carrier Bureau at 775-684-4711 for more information.

WASHINGTON FUEL TAX PERMITS

Temporary permits can be obtained from several permit agents, but the Washington Truckers Association is the only one through which a person can call, pay by credit card, and have a permit faxed back. Call the Washington Truckers Association at 800-732-9019 or 253-838-1650.

IDAHO FUEL TAX PERMITS

Temporary permits can be obtained at the first Idaho truck stop or Port of Entry, or by calling the East Boise Port of Entry at 208-334-3272. Farmers registered with Idaho can go online for service — <http://trucking.idaho.gov/>

Types of Truck Safety Inspections Conducted Throughout North America

LEVEL 1 — A complete inspection that includes a check of the driver's license, medical examiner's certificate (and waiver, if any), alcohol and drugs, hours of service, seat belt, annual vehicle inspection report, brake system, coupling devices, exhaust system, frame, fuel system, turn signals, brake and tail lamps, headlamps, lamps on loads, load securement, steering, suspension, tires, van and open-top trailer bodies, wheels and rims, windshield wipers, emergency exits on buses and hazardous materials requirements, as applicable.

LEVEL 2 — A “walk-around” inspection that includes a check of each of the items in a Level 1 inspection, but not items that require the inspector to physically get under the truck.

LEVEL 3 — An inspection of just the driver-related items in a Level 1 inspection.

LEVEL 4 — A special inspection, typically a one-time examination of a particular item for a safety study or to verify or refute a suspected trend.

LEVEL 5 — An inspection of just the truck-related items in a Level 1 inspection.

LEVEL 6 — An inspection of a shipment of highway-route-controlled quantities of radioactive material. A Level 6 inspection includes an enhanced check of each of the items in a Level 1 inspection.

Level 2 “Walk Around” Checklist

- 1** Identify company name and check for a U.S. DOT number.
- 2** Review driver documents and check for appropriate driver license.
- 3** If hauling hazardous materials, check shipping paper, package labels, and placarding.
- 4** Inspect front of truck. Check lights, windshield, wipers, horn, wheels, and tires.
- 5** Inspect left side of truck. Check fuel tanks, air and electrical lines, wheels and tires, exhaust system, coupling device, side lamps, and condition of vehicle and trailer body. Check tractors and trailers for required reflective tape.
- 6** Inspect rear of truck. Check lights, rear bumper, wheels and tires, reflective tape.
- 7** Inspect right side of truck. Inspect as described in #5.
- 8** Check for proper cargo securement. Check for unsecured dunnage, tools, and spare tire.
- 9** Inspect inside truck. Check for low air brake warning device. Check same for vacuum and hydraulic brakes. Check fire extinguisher and reflective triangles.
- 10** Complete the inspection document and return documents to the driver.

For-Hire Farmer Records Requirements

Oregon farmers hauling commodities for-hire are subject to the Oregon weight-mile tax and record keeping requirements (see page 14). Once a

farmer begins for-hire operations, records must be kept for 3 years on all operations so it can be determined which miles are subject to weight-mile tax and which are exempt. (Operations exempt from

the weight mile tax are still subject to Oregon fuels tax and must file monthly or quarterly tax reports) Farmers who conduct for-hire operations in addition to their own farm operations must keep a daily record of their for-hire and farm operations.

Daily Record of Farm Vehicle Operation

www.odot.state.or.us/forms/motcarr/reg/9448.pdf

One confusing aspect of conducting both for-hire and farm operations is determining when one ends and the other begins. If a farmer hauls for-hire one week and for his farm the next, when did the for-hire hauling actually end and when did the farm-related hauling begin? For-hire miles begin at the point of loading a for-hire commodity and continue until a farm-related commodity is loaded. This includes all empty miles from the time the for-hire load is delivered until a farm-related commodity is again loaded. If an auditor is unable to distinguish between farm-related and for-hire mileage, all miles, including the farm operation's mileage, may be considered taxable.
